Theft Risk Management

Marine theft risk

Marine assets, even those believed secure, are vulnerable to theft. We are often taught not to gamble, but many gamble daily, allowing valued assets to be stolen without the means of instigating a safe and quick recovery.

When it comes to the recovery of stolen marine assets, there is no number plate recognition system, compulsory insurance or registration database to aid investigation. With little else to help the police, marine theft recovery and prosecution rates remain low.

It is therefore not much of a surprise to find that marine theft is now showing signs of being on the increase. For criminals, targeting the marine user represents an easier choice, poor if any security systems from marine manufactures are easily overcome, combined with, little if any risk of ever being caught.

Top of the marine theft 'Most Wanted List'outboard engines, closely followed by PWC and RIB's, with reports on these alone, expected soon to break two thousand five hundred on www.stolenboats.org.uk

The true cost of marine crime is unknown, with many marine crimes going unreported. The use of locks, wheel clamps, electronic ID tags and alarms can act as a deterrent but will do little to protect against a determined thief, and do not provide directly any means of locating the asset.

How Automatics can help

The financial loss risk from theft can be virtually eliminated through the selection of our Mtrack Boatwatch after theft recovery protection service. As the world's first marine theft recovery service to win a Thatcham Quality Accreditation and to pass trials with Hampshire marine police our services offer owner's with peace of mind.

We feel it important to stay ahead of not only our competitors but more significantly the criminals, by keeping them guessing. Mtrack Boatwatch covert systems have been dynamically developed to suit the most demanding of applications, including the protection of outboard engines, PWC, RIBS and most other craft. Our unique theft recovery protection services deliver up to three separate location technologies GPS, GSM and RF using a global wireless platform ensures we can recover protected assets in the most challenging circumstances.

We believe Automatics are best placed to advise all on the advantages of using effective marine theft recovery.

Offshore Race Tracking

There are considerable advantages with having the Mtrack Boatwatch portable GPS tracking unit placed into competitor's vessels before the start of a race. The detailed GPS data for each vessel can be viewed in real time by safety officers to help them identify vessels showing early signs of distress and by race officials to check rule conformance at the race start, turning points, exclusion zones and finish line.

Regular GPS race status reports can additionally be made available to the much larger viewing public to watch the race online. This could provide additional sponsorship opportunities for race sponsors, Automatics with our partners have already successfully completed the race tracking services for RI10 (Round Ireland 2010) and currently progressing trials for RB12 (Round Britain 2012).

Our Values

We value integrity, competency and a flexible approach to ensure we can meet a wide range of customer needs. Working with various clients within different industries on an international scale allows us to consider individual needs and to respect and understand different approaches. Our customers can be assured that confidentiality is maintained at all times.

Our Strengths

We have a detailed and deep understanding of theft recovery and worldwide asset tracking business, armed with technology which leads the industry. Our systems design capability ensures customers' requirements are met. We work proactively with law enforcement agencies and other like minded authorities, and are partnered by preferred suppliers and service providers in world markets.

We work with clients closely on budgetary needs, developing purchase options including tax efficient lease rental, low investment upgrades, documentation and training support.

Our Future

Automatics is a company developed on foundations of competence and sector knowledge, our forward growth will be achieved without compromise to our client's service experience.

Our Partners

Thatcham* Reassurance

Thatcham Quality Accreditation (TQA®) is a robust verification programme, selected for the assessment and recognition of the Automatics Mtrack Boatwatch service, Thatcham TQA concentrates on building and verifying the quality in the manufacture, designs and service performance.

Mtrack Boatwatch has been successfully tested against predefined criteria established by Thatcham. This testing, supported by rigorous examination of our quality systems and manufacturing process controls, is intended to provide confidence in service performance capability for end users and insurers.

Certification is monitored and periodically reviewed by Thatcham throughout the duration of the accreditation to ensure that the Automatics quality, service and performance are retained.

Mtrack Boatwatch complies with The British Insurance Industry Quality Accreditation Process.

Working Together

Automatics, as members of the British Marine Federation, brings knowledge to our clients that we are actively supporting the marine industry. Our proactive initiatives with the BMF have led us to present our marine certified theft recovery tracking services to the Stolen Boats committee as an example of the benefits that are available from users selecting a TQA marine certified theft recovery service.

Additionally, Automatics has conducted successful theft recovery tracking tests with Hampshire Marine Police, working with our boat registration scheme partners Chip and Trace Pro.

A number of Marine insurers recognise the partnership between the end user, the TQA security service provider and themselves, and are looking to provide additional support to end users in the form of discounts on their annual insurance premium, removal of excess fee, and protection of no claims discount.

Installation

Mtrack Boatwatch battery units are simple to install, working with our team over the phone we can test the installation in just a few minutes. If you prefer one of our wired tracking solutions we have a number of marine installation partners who can help, with expert sector knowledge, offering a professional, friendly and caring service to ensure the highest levels of quality are maintained throughout installation.

Finding Operations

A radio find operation is required when assets are hidden from GPS view or when we are only using the GSM and RF location technology. Automatics will deploy the closest available finding agent. All agents are preferred, highly trained and professional staff selected specifically for this role. Agents will operate within the guidelines of the law in all countries of recovery, once an asset is positively located we liaise with the relevant authority to aid final recovery and we manage this process on the behalf of clients.

Patented Technology

Automatics selects world leading patented design technology and web based global mapping software from leading wireless solution providers in Norway. Partner service centres with well trained supporting staff provide a network service extension in all countries represented.

“We will endeavour to always provide an effective service targeted beyond our customers’ expectations”

* Thatcham Accreditation is the certification mark of Thatcham MIRRC
